SEARCH Transparent Palm/Cluster Lifters

Catalog Nos. 135LB, 135LT, 135LW

INTRODUCTION

These 6" x 9" lifters are designed to accommodate palm or cluster (multiple) prints that are developed with powder on flat surfaces. The SEARCH Palm/Cluster Lifters are transparent and pre-assembled—featuring a clear acrylic adhesive on a .005" thick Mylar® sheet attached to a .010" thick transparent, black, or white vinyl backing sheet. Lifters are packaged 12 to a package.

PROCEDURE

1. Remove the protective sheet by peeling it off beginning at the score along its length.
2. Apply one end of the lifter to the surface containing the developed palm/cluster print. Slowly and firmly press it to the surface—rub the lifter to force out any air bubbles that may have formed.

3. Slowly lift one corner of the lifter from the surface, peeling it from one end to the other.
4. Apply it to the appropriate colored backing sheet (black, white, or transparent). With the backing sheet affixed to the adhesive side of the lifter, the palm/cluster prints are protected and may easily be examined.

REORDER:

No. 135LB6" x 9" Lifters w/black backing sheet, 12 each

No. 135LT6" x 9" Lifters w/transparent backing sheet, 12 each

No. 135LW6" x 9" Lifters w/white backing sheet, 12 each
