
TECHNICAL INFORMATION

Camera Filter Assembly Sizing

Catalog No. BMCF100

PROCEDURE

Filter threads are measured in millimeters (mm), so obtain a metric ruler. Place the ruler across the diameter (widest part) of the camera lens as illustrated so that the “0” point is at the inner edge of the filter threads and measure to the opposite side. Choose the size closest to this measurement from the following list of standard filter sizes (mm):

**37, 49, 52, 55, 58, 62, 67, 72, 77,
and 82mm**
