Evidence Packaging, Labeling & Sealing

Proper handling, documentation, and preservation of evidence is critical to maintaining the integrity of investigations. The wrong packaging, mislabeling, or leaving evidence unprotected can make the difference in establishing justice. The roles of Property and Evidence Managers and Investigators often overlap and must rely on one another to ensure that the evidence is maintained properly from the crime scene to the courtroom.

We know how important evidence management is and how varied evidence can be (Is it fragile? Should it be away from direct sunlight? Does it need an airtight seal? Does the evidence need to breathe to preserve its integrity?).

When you're looking for the right evidence packaging, you're thinking about:

- What types of evidence you'll be handling
- Whether the evidence needs to breathe
- Physiological/DNA considerations for protection and contamination process
- The correct container to preserve the integrity of the evidence
- The climate and weather conditions of your geographic area

We can help you answer those questions: we're your partner when it comes to the proper collection, labeling, transporting, and storing of evidence. We offer the right packaging solutions for digital evidence; DNA and biological deposits; biohazard materials; liquids; solid evidence that needs an airtight seal; documents; narcotics and controlled substances; and more.

NARK Single-Use Powder Substance Packaging, Transport, Testing Kit

Following DEA and CDC guidelines, we developed this one-time use PPE Kit to be used specifically around powdery substances that could contain fentanyl, carfentanyl, or other powerful opioid-based substances.

See Page 4 for details!

Fentanyl Reagent

Fentanyl Reagent presumptive test is designed to identify either Fentanyl or Acetyl-fentanyl which is commonly cut into Heroin or sold as a stand alone substance. Fentanyl is a fully synthetic opiate that falls under Schedule II in the Controlled Substance Act.

NARKsafe™ Protection & Packaging

NARK Single-Use Powder Substance Packaging, Transport, Testing Kit

Any powdery substance encountered on the street should be considered dangerous. Law enforcement needs to proceed with caution while handling, transporting, and testing these substances.

Following DEA and CDC guidelines, we developed this one-time use PPE Kit to be used specifically around powdery substances that could contain fentanyl, carfentanil, or other powerful opioid-based substances.

Kit contains: coveralls; P-100 respirator; two pair of nitrile gloves; goggles; evidence bag; a biohazard bag; and donning/doffing instruction card.

No. NARK300PPE **NARK Single-Use Powder Substance Kit**

Disposable P100 Respirator Mask

This Respirator offers the highest level of NIOSH rated filtration efficiency in a maintenance-free respirator. It features a 3M™ Cool Flow™ Exhalation Valve, a face seal, adjustable noseclip, lightweight construction and an all filter design. Sold individually. Meets 42 CFR84 standard.

No. NARK300P100R **Disposable P100 Respirator Mask**

Chemical Splash Goggles

Protect your eyes from chemicals in the lab. Full coverage goggles fit over regular eye glasses.

No. CSG1001

Liquid Sampling Kits

Many protocols for the collection, transport, and storage of hazardous substances, including those often found at clandestine meth labs, recommend or require placing the substance in a glass jar and then placing the jar inside a Nalgene® jar. The use of leak proof glass and Nalgene® jars helps to enhance the safety of all personnel and preserve the evidence. Each of the Sirchie Liquid Sampling Kits is designed to have a glass jar that fits perfectly into a Nalgene® jar with pipettes for collection of the substance.

30ml Liquid Sampling Kit

This kit includes 30ml Nalgene® Bottles (12 each), 4ml Glass Vials (12 each), and Disposable Pipettes (12 each).

NARKsafe™ Testing Workstation

NARKsafe™ Illicit Substance Testing Workstation

Fentanyl-related deaths are increasing as the opioid epidemic increases worldwide. Fentanyl is deadly if swallowed, inhaled, or absorbed through the skin, so being protected when handling suspected substances is paramount. NARKsafe™ fume hood enclosures are ideal for protecting professionals during the forensic analysis of fentanyl and other dangerous substances. Only this system offers a turbulence-free, horizontal laminar airflow with dual HEPA filtration.

NARKsafe™ enclosure provides a negative pressure environment to pull any particulate away from the operator and eliminate end-user exposure. It also allows for the addition of a bonded carbon filter, so analysis of other chemical solutions or marijuana exhibits can be safely handled in the same workspace. Available in three widths: 36", 48", 72".

Why NARKsafe™ is the only enclosure to use when testing illicit substances:

- Horizontal laminar airflow pattern
- Dual HEPA filtration
- HEPA filters with 99.997% efficiency rating for collecting 0.3-micron particles
- Electrostatically charged pre-filter to collect larger particulate and minimize clogging of the HEPA filter
- ASHRAE 110 testing adjustable face velocity
- Ability to replace contaminated filters under negative pressure.
- Blue flooring to see substances clearly when testing

i When testing illicit substances and changing filters, the operator should always follow Drug Enforcement Administration (DEA) and the Centers for Disease Control (CDC) guidelines for handling fentanyl, carfentanyl and acetyl-fentanyl.
